

# The Perfect Garden Hose®

Made in USA

Extra Flexible  
Ultra Lightweight  
KINK-FREE

The unique polypropylene double helix construction of The Perfect Garden Hose® makes this the most flexible and only “unkinkable” garden hose.

The double helix construction also allows The Perfect Garden Hose® to be 35%-50% lighter than the average garden hose. The hose is weather resistant and remains completely flexible at temperatures from -20°F to 158°F. Its unique construction provides, abrasion, chemical, and crush resistance all while retaining superior durability.

Unlike other garden hoses, the heavy duty brass fittings are internally expanded to provide “full flow”. The internal expansion also locks the fittings into a ribbed ferrule that “grips” the outer helical. Using the internal expansion along with the ribbed ferrule provides the best resistance against end pull-offs and leaks.

All of these features make The Perfect Garden Hose® ideal for residential and light commercial users. The hose is as suited for washing your car, RV, or boat as it is for wash-down use in industrial plants, horse barns, and landscape applications.

- KINK-FREE
- Maximum Flow Fittings
- Professional Grade
- Easy Handling
- 35% - 50% Lighter
- Flexible from -20°F to 158°F
